
A Three-Level Program Designed by and for Mental Health Providers

Why Scoliosis?

Kids and teens with scoliosis are an underserved population when it comes to mental health care. This population struggles with mental health concerns, ranging from anxiety to diminished body image, to an increased risk for suicidal ideations.

While the emotional effects of scoliosis have been heavily researched and documented, little is done to help patients through the process. Our goal at Scolios-us is to change that by educating mental health providers and increasing access to mental health services.

Added Bonus for You

After completing the Level 1 training, you will be eligible to be featured on the "Scoliosis Mental Health Providers" page on Scolios-us, so local patients can find you and seek your services.
